

Peripheral Assignments

1. Blinking of an LED Using HAL Write and Toggle APIs.
2. Using polling method read key press for Key-1 and Key-2 and accordingly toggle LED-1 and LED-2 on key press.
3. Repeat Assignment 2 using interrupt method for key press.
4. Blink LEDs using System timer interrupt.
5. Blink LEDs in sequence using Timer auto reload interrupt method.
6. Develop a logic of Pulse Width Measurement Timer for toggling the LEDs.
7. Using PWM Timer method, control the intensity of an LED

NOTE:

1. All programs should be properly commented and make use of schematic given for the board.
2. Refer the relevant documents like TRM, data sheets etc for peripheral register configuration.
