

ARM STM32F4 Peripheral Assignments -2

1. Write a program to transfer a string of characters continuously on UART2 interface with polling and interrupt based mechanism.
2. Write a program to do loop operation on UART2 interface with polling and interrupt techniques, take care of carriage return.
3. Write a program to print on serial console "key Pressed" whenever user presses the key, configure interrupts for both USART and user button. Allocate higher priority interrupt for user button than USART.
4. Write a program to use timer as counter to count the key press and print on the serial console continuously the count of key press.
